

# GIPR Collaborate

our contracts collaboration product

Real-time contract collaboration across teams in one workspace, with seamless sync back to your CLM for execution.

## The Problem

### Collaboration Chaos During Contract Review

Disconnected teams rely on email chains, creating version chaos and zero real-time visibility.

### CLM System Limitations

Rigid CLMs lock users into their environment, creating friction and killing cross-team adoption.

### Platform Migration Disruption

Migration costs and team retraining create so much friction that companies avoid switching entirely.

### Lack of Real-Time Visibility

No unified view means approval delays and compliance blind spots that surface only after the fact.

## The Solution

### Seamless Multi-Team Collaboration

Extract contracts to SharePoint, Google Docs, or your repository of choice so all teams collaborate live with a full audit trail of edits and approvals.

### Work Where Your Teams Already Work

No new tools to learn. Teams work in SharePoint, and finalized contracts sync back to your CLM automatically.

### Zero Migration Risk

Extend your CLM with real collaboration features instead of rebuilding infrastructure.

### Complete Visibility & Control

Track workflows in real time with automated reminders and full compliance reporting stored for 7 years.

## Key Capabilities

### Enterprise-Grade Security.

OAuth2-secured integrations with enterprise-grade security

**Smart Automation.** Automated escalation for stalled approvals with configurable 24/48/72 hour triggers

**Lightning Fast.** Sub-2-second response times supporting 100+ concurrent workflows without performance degradation

**Compliance Ready.** GDPR-compliant with comprehensive audit trails retained for 7 years for regulatory requirements
